Expected Behavior and Output

- The enrollment page should be created using HTML5, CSS3 and Javascript.
- All fields of the form should have necessary validations and error messages on validation failure.
- On form submission the enrolled student should be added dynamically to the table using javascript
- The image should be loaded from the URL submitted in the form and website link should open in a new tab on clicking
- The new enrollment should be added with a fade-in effect achieved using CSS animations.
- The webpage should be responsive for all resolutions and screen-sizes.
- Bootstrap framework should be used for layout and forms.
- UI should match as shown in the mockup

Evaluation Criteria

- Code completeness and correctness
- Use of HTML5 features/semantic tags
- Usage of CSS3 styling and animations
- Javascript usage
- Code quality (Variable names/separate style and script files)
- Responsiveness
- Usage of Bootstrap framework
