Assignment #6

Problem Statement

Create CI-CD pipelines for the applications already developed in Assignment #5. Two separate pipelines need to be created; one for Spring MVC application and one for the spring boot application. Only pipelines need to be created and code will be re-used from Assignment #5.

The build should get automatically triggered if there are any new commits in the repository.

Expected Behavior and Output

- The complete assignment should be done using Jenkins and required plugins only.

- The pipelines should pass with BUILD SUCCESS.

- Assignment submission will be a demo and mentee must present the created pipelines to the respective mentor.

Evaluation Criteria

- Pipelines Completeness and Correctness

- Pipelines in running condition

- Face to face discussion
